Module 4

Digital photography with smartphones in open source environments

Slide 2

Photo by Behzad Ghaffarian: https://unsplash.com/photos/5lcdQfzR_YA

Topics

- How to make a good photo with smartphones
- How to share photos on the most popular social media (examples and tips for beginners and professionals)
- How to download photos of other authors from open source platforms safely and respecting the copyrights

The topics of Module 4 are:

- How to make a good photo with smartphones;
- How to share photos on the most popular social media (examples and tips for beginners and professionals);
- How to download photos of other authors from open source platforms safely and respecting the copyrights.

Activity nr. I - Energizers

- Trainers are involved in this exercise too
- Make the portrait of the person next to you
- Create a new WhatsApp group “The Wires-Crossed Photographers”
- Share the portraits with participants’ names

Photo by Federico Beccari: <https://unsplash.com/@federize>

In this first activity we will present ourselves through a photograph portrait, considering that:

- Trainers are involved in this exercise too;
- Everyone should make the portrait of his/her neighbour;
- The participants should create a new WhatsApp group “The Wires-Crossed Photographers”;
- After this simple task, participants will share the portraits with the participants’ names.

6 tips for smartphone portraits (1/3)

Photo by Riley Bowden: <https://unsplash.com/photos/Ncoqhu-1h1g>

6 tips for smartphone portraits:

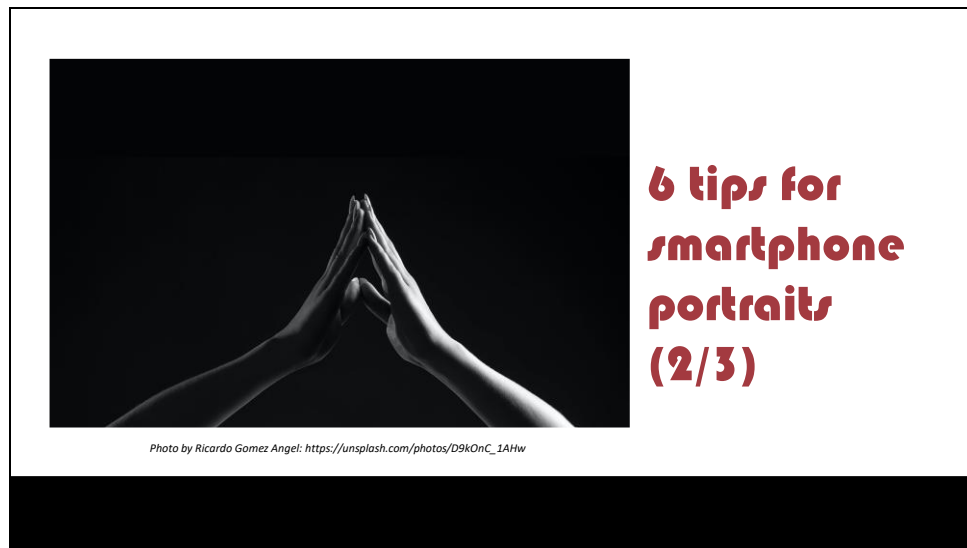

1. Keep your lens clean

This might seem obvious but using "the camera you have with you" can mean that we sometimes forget it's a camera. Like any camera lens, ensure it is dust- and smear-free before starting.

2. Avoid using digital zoom

When shooting with the fixed focal length of your smartphone's camera, zoom with your feet. Digital zoom simply can't compare to moving your optics closer to your subject.

Source: <https://www.dpreview.com/articles/4486123341/smartphone-portraits-advice-from-mpa-finalist-alfred-pleyer>

6 tips for smartphone portraits:

3. Try converting your image to black & white

"I love black and white - a black and white image lets you concentrate on facial expressions, and composition," Pleyer said.

4. Connect with your subject

"Try to interact with your subject prior to taking their photo and this will make them more comfortable," Pleyer said. "You will bring back a better photo with more personality."

Source: <https://www.dpreview.com/articles/4486123341/smartphone-portraits-advice-from-mpa-finalist-alfred-pleyer>

6 tips for smartphone portraits (3/3)

Photo by Federico Beccari: <https://unsplash.com/@federize>

6 tips for smartphone portraits

5. Shoot on a cloudy day.

"Avoid the sun," Pleyer said. "The best type of day for taking portraits is an overcast one."

6. Consider your background

"Think about your background, a camera phone isn't able to isolate the subject from the background," Pleyer said. "You have two options: first, make sure your subject is in front of a simple background, or fill the image with your subject."

Source: <https://www.dpreview.com/articles/4486123341/smartphone-portraits-advice-from-mpa-finalist-alfred-pleyer>

**Now it's your
turn!**

Let's do our portraits ...

"Man reading in Pushkar, India" by Alfred Pleyer

Now it's your turn! Let's do our portraits ...

Some further tips for Mobile Photography Portraits: use natural lights when possible, consider your angles, use portrait mode (if available), choose the background wisely, take multiple shots, play around with shadows, find different perspectives, get your creative juices flowing.

Street Photography: main concepts

Photo by Molly Porter: <https://unsplash.com/@mollyporter>

In the following slides you will find the presentation of the main concepts about smartphone photography and street photography.

Real News & Street Photography

By positioning the active citizen between visual production of knowledge and circulation of commodities, Lunacharsky implicates, however inadvertently, photography's complex relationship with the social order.

"Photographs are not simply images or representations, they are also outcomes of various power-knowledge practices and material objects that not only circulate within society, but also significantly contribute to the circulation of other goods, knowledge and political power."

Source: Press Photography and Visual Framing of News, by Ilija Tomanić Trivundža, Ljubljana 2015

Street Photography FAQ

Source: <https://photographylife.com/what-is-street-photography>

How do I get started in street photography?

To get started in street photography, all you need is a camera (any modern camera, including a smartphone, will do), and public space to photograph. Start with a busy location with lots of people and see if you can find something or someone interesting. Observe people's behaviour and appearance and aim to showcase a clearly defined subject to the viewer. Watch for patterns, textures, lines, and always try to take advantage of available light to bring out your subject(s) in the best way possible. Use compositional rules to position your subject and watch out for distractions that might take away the viewer's attention.

Typically, street photography is about candidly capturing life in public areas. And contrary to its name, street photography does not have to be done on the streets. You can do street photography anywhere.

Source: <https://photographylife.com/what-is-street-photography>

Street Photography FAQ

Source: <https://photographylife.com/what-is-street-photography>

What is good street photography?

Good street photography showcases the lives and the emotions of people at a given moment of time. They show clearly defined subjects, tell their story, as well as bring emotions to the viewer. If a photograph can make the viewer pause and ask questions, it is often considered to be a successful street photograph.

Source: <https://photographylife.com/what-is-street-photography>

Street Photography FAQ

Source: <https://photographylife.com/what-is-street-photography>

Does street photography have to have people in it?

That's up to the photographer to decide. While some photographers might argue that street photography has to show people, others believe it is perfectly OK to photograph public spaces by themselves without anyone in them. Personally, I take a more laid-back approach. While I believe that street photographs do not need people, they do need the suggestion that someone was there.

Source: <https://photographylife.com/what-is-street-photography>

Street Photography FAQ

Source: <https://photographylife.com/what-is-street-photography>

Why is street photography so popular?

Street photography offers many different opportunities to practice creativity, as well as a chance to document the lives of people and their surroundings. Many photographers find street photography to be rewarding because it is their way to showcase different moments of time.

Source: <https://photographylife.com/what-is-street-photography>

Street Photography FAQ

Source: <https://photographylife.com/what-is-street-photography>

Is street photography legal?

In most countries, photographing public space is perfectly legal. In the USA, it is legal to photograph any subject within the public space without needing their consent. However, one must exercise caution and understand local laws and regulations, as well as consider photography ethics when doing street photography.

Source: <https://photographylife.com/what-is-street-photography>

Street Photography FAQ

Source: <https://photographylife.com/what-is-street-photography>

Is it illegal to take a picture of a random person?

Unless you are on private property, or there are specific rules for the public space you are in (such as “no photography” signs, etc.), photographing random subjects is not illegal.

Source: <https://photographylife.com/what-is-street-photography>

Street Photography FAQ

Do I need a model release for street photography?

Short exercise:

- Are you aware about your national laws and related rights and restrictions (for photographers and people in public spaces)
- Reflect and share about ethics and mutual rights

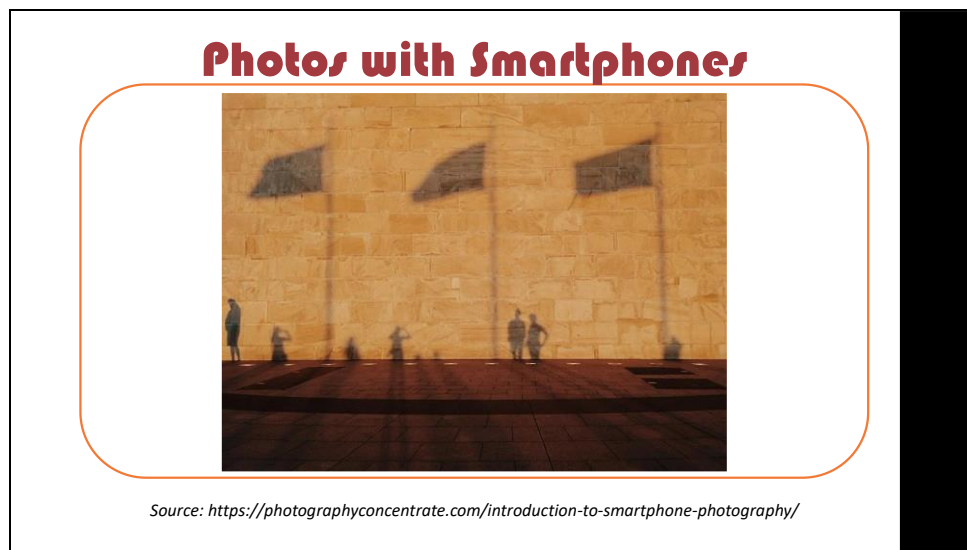

Source: <https://photographylife.com/what-is-street-photography>

Photos with smartphones

A few things to consider from a photography perspective

Image quality

What do the photos coming out of the camera look like? Check for things like sharpness, contrast, saturation and colour (white balance and tint). Online reviews with photo examples are a great help here!

Megapixels

If you're looking to share or print your images at larger sizes, as a very general rule more megapixels on a phone is better.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with Smartphones

A few things to consider from a photography perspective

Screen
Consider things like screen size, resolution, and the quality of the contrast. These will all make a difference in how easy it is to use your camera, especially in tricky lighting conditions, like low light and direct sun. They will also influence how similar the image on your phone looks to that same image when it's posted online or printed out.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Consider things like screen size, resolution, and the quality of the contrast. These'll all make a difference in how easy it is to use your camera, especially in tricky lighting conditions, like low light and direct sun. They'll also influence how similar the image on your phone looks to that same image when it's posted online or printed out.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with smartphones

A few things to consider from a photography perspective

Image stabilization

These days, some smartphone cameras come equipped with image stabilization – a function that reduces blurriness caused by movement of the camera. This can make a big difference in the quality of your photos and videos, especially in low-light conditions!

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with Smartphones

A few things to consider from a photography perspective

Video quality

Almost all camera phones can shoot HD video (1080P). But some camera phones support shooting at faster frame rates (for slow motion video). And a few cutting-edge smartphone cameras can shoot at an ultra-high definition (4K) resolution.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with smartphones

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with smartphones

A few things to consider from a photography perspective

Popularity

Generally, if you choose a more popular phone, you'll have more options when it comes to apps and accessories, and you'll have an easier time tracking down replacement parts (like USB cables and chargers).

Operating systems & device compatibility

If you're used to working with a particular operating system or want your phone to be compatible with your other devices, you may want to choose a phone from the same brand.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with smartphones

A few things to consider from a photography perspective

Storage space

If you plan to take a lot of photos (and/or use a lot of apps) you may want to opt for a phone with lots of storage space. Our current phones have 32 GB of space, and we wouldn't want any less.

Battery life

Your battery life will depend on a lot of things (like how much you use your phone and what apps you run in the background), but it's worth getting an idea of what the maximum battery life is.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with Smartphones

A few things to consider from a photography perspective

Other camera features
Do you care about having burst mode, exposure control, panorama capabilities, etc.? If so, do your research and see whether the phone you're eyeing comes with those features (or a relevant app).

Price
As a general rule, the better the camera features, the more expensive the phone will be. If you're serious about smartphone photography, it may be worth it to pay the premium. But don't lose sight of the fact that smartphones still don't match the quality of DSLRs or even advanced point-and-shoots (the photos from which you can share on platforms like Instagram and Flickr).

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with Smartphones

iPhones vs. Android Phones

Photo by Daniel Romero, <https://unsplash.com/@rmdn1>

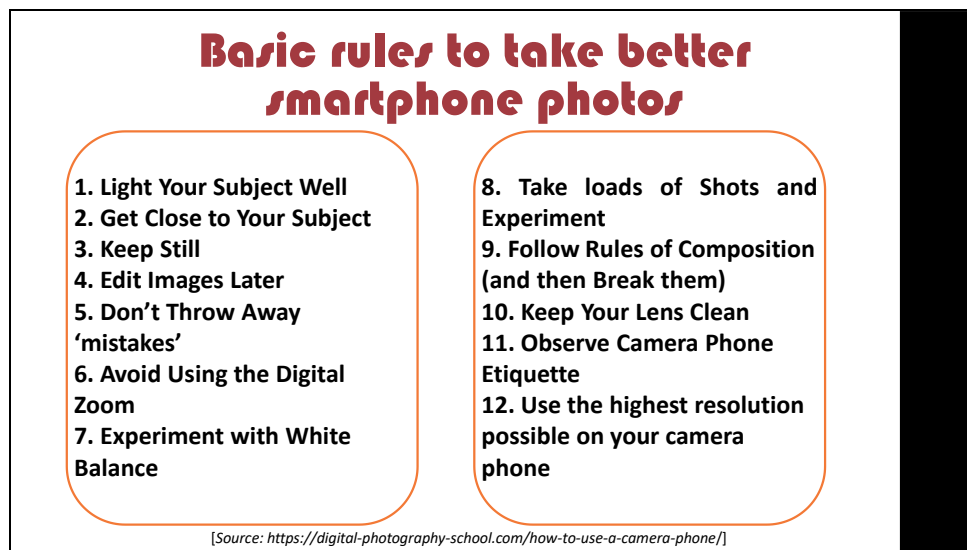

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Photos with smartphones

iPhones vs. Android Phones

There are two main types of smartphones that dominate the market: iPhones and Android phones. iPhones are made exclusively by Apple and run the iOS operating system. In contrast, Android phones can be made by a bunch of different companies (Samsung, LG, etc.). The name instead comes from the operating system those phones run – the Android system developed by Google.

Source: <https://photographyconcentrate.com/introduction-to-smartphone-photography/>

Basic rules to take better smartphone photos

1. Light Your Subject Well

The better lit your subject is the clearer your image is likely to be. If possible, shoot outside or turn on lights when shooting inside.

2. Get Close to Your Subject

One of the most common mistakes with camera phone images is that their subject ends up being a tiny, unrecognizable object in the distance.

3. Keep Still

As with all digital photography, the steadier your camera phone is when taking your shot, the clearer your image will be.

4. Edit Images Later

Whilst it can be fun to use your camera phone's inbuilt editing and effects, editing pictures later your computer produces much better-quality images. Take your shots in colour at high resolution to keep your options open on how to treat it later.

5. Don't Throw Away 'mistakes'

Remember that on many phones the quality of the screen will not be as good as your computer's. So, if possible, hang onto your shots until you can get them on your PC. You might just find that they come alive on a quality monitor.

6. Avoid Using the Digital Zoom

As tempting as it might be to zoom in on your subject when taking your picture (if you have a zoom feature on your camera phone), if the zoom is a 'digital zoom' it will decrease the quality of your shot to use it (you'll end up with a more pixelated shot).

7. Experiment with White Balance

An increasing number of camera phones come with adjustable white balance which allows you to modify color balance in your images based on shooting conditions.

8. Take loads of Shots and Experiment

Camera phones are particularly good for experimenting with new angles and perspectives – shoot from down low, up high, close up etc. and you will end up with interesting and fun shots.

9. Follow Rules of Composition (and then Break them)

Learn some basic composition rules. (for example – the rule of thirds – i.e. don't place your subject squarely in the middle of your frame but a third of the way in). Simple tips like this can bring life to your photos.

10. Keep Your Lens Clean

One of the challenges with many camera phones is keeping them maintained and clean.

11. Observe Camera Phone Etiquette

While there is no formal set of rules for using camera phones – it is worth considering how you use it and what impact it might have upon others. There are many cases of camera phones being abused to take sneaky or voyeuristic photos. Ask permission to photograph strangers, consider restrictions on the use of cameras in places like theatres and concerts etc.

12. Use the highest resolution possible on your camera phone

Some phones allow you to choose what resolution you want to take photos at. Keep in mind however that the higher the resolution the larger the file size of the images you take – this means if you want to send images, they can end up taking a long time to send.

ACTIVITY nr.2

**My personal lenses and
my point of view**

Photo by Bud Helisson: <https://unsplash.com/@budhelisson>

Activity nr.2

My personal lenses and my point of view

My personal lenses and my point of view

Real news topic

Step 1: Go outside and find inspiration

Step 2: Make photos and select your choice

Step 3: Share your ideas with the other groups

Photo by Bud Halisson: <https://unsplash.com/@budhalisson>

My personal lenses and my point of view

This activity will engage participants in an outdoor task. Participants are asked to form small groups, associated by working hypotheses on the same, or similar, topic. The aim is to team up by sharing everyone's knowledge and skills through a concrete task. Please, follow the three steps:

Step 1: Go outside and find inspiration

Step 2: Make photos and select your choice

Step 3: Share your ideas with the other groups

Step 1

Finding inspiration for the photos of the “real news”

Photo by Amanda Jones - <https://unsplash.com/photos/w5zpEIVtNIK>

My personal lenses and my point of view

Step 1 – Finding inspiration for the photos of the “real news”

In this initial phase, participants share ideas about the images of their communities that should be shown and associated to some “real news” produced or to be produced. Before going outside with your smartphones, you are asked to make a short briefing among the members of the small groups of 2 or 3 persons about the potential subjects. Please, take notes about your initial ideas!

Step 2

Make photos and select your choice

Photo by Anne Sprat - <https://unsplash.com/photos/6Aj3eKsng8c>

My personal lenses and my point of view

Step 2 – Make photos and select your choice

Reflecting on the inspirations provided by the concepts of street photography and the basic rules for the composition of good photography, participants will provide **5 photos** per each group, that will be observed, evaluated and selected by the whole group, during the plenary.

My personal lenses and my point of view

Step 3 – Connect and sharing

Coming back indoors, photos will be shared on a common platform (to choose among the most popular, like Google Drive, Dropbox, or on the WhatsApp Group etc.) and showed in plenary.

Examples of Social Media

Examples of Social Media

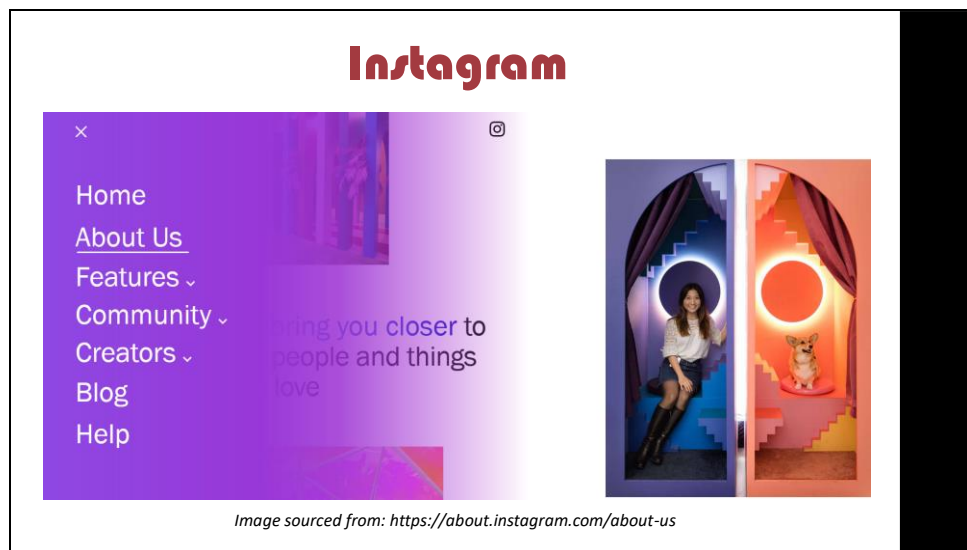

What is Facebook?

Established in 2004, from the college dorm room of Mark Zuckerberg, a Harvard student, the website is now worth billions of dollars and is one of the world's most recognisable brands. It's even had the Hollywood treatment, with *The Social Network*, a film exploring the site's conception, released to wide acclaim in 2011.

Facebook is a website which allows users, who sign-up for free profiles, to connect with friends, work colleagues or people they don't know, online. It allows users to share pictures, music, videos, and articles, as well as their own thoughts and opinions with however many people they like.

Source: <https://www.webwise.ie/parents/explained-what-is-facebook-2/>

What is Instagram?

At its most basic, Instagram is a social networking app which allows its users to share pictures and videos with their friends. The app can be **downloaded for free** from the usual app stores and takes pride of place on many a young person's (and older!) smartphone.

The company was founded by Kevin Systrom and Mike Krieger, both Stanford University graduates, in 2010 and now has around 200 million users. Facebook, the social networking giant, acquired the company in 2012.

The app allows for the creation of personal profiles but also can be connected to existing social networking profiles such as Facebook and Twitter, meaning users can share their pictures across platforms.

Source: <https://www.webwise.ie/parents/explained-image-sharing-app-instagram/>

A short summary of the online platforms for photos

When you want to share a photo or an album with friends, family, a message board, or even the entire Internet, an image hosting site is the best way to upload, store, and share your files.

However, there are many image hosting sites, all with different features. The best site for you will depend on how many photos you need to upload, how much time you want to spend uploading, and the reason you're uploading the photos.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

Google Photos is one of the best image hosting services for uploading high-quality photos in large quantities. The site has an automatic backup feature, so you don't have to worry about losing any of your photos. Google Photos allows you to edit and organize your photos, and you can easily find older photos again with a visual search. As you use the platform more and more, it will recognize your photo habits and learn to automatically sort your photos, reducing the amount of work you need to do to keep your photos organized.

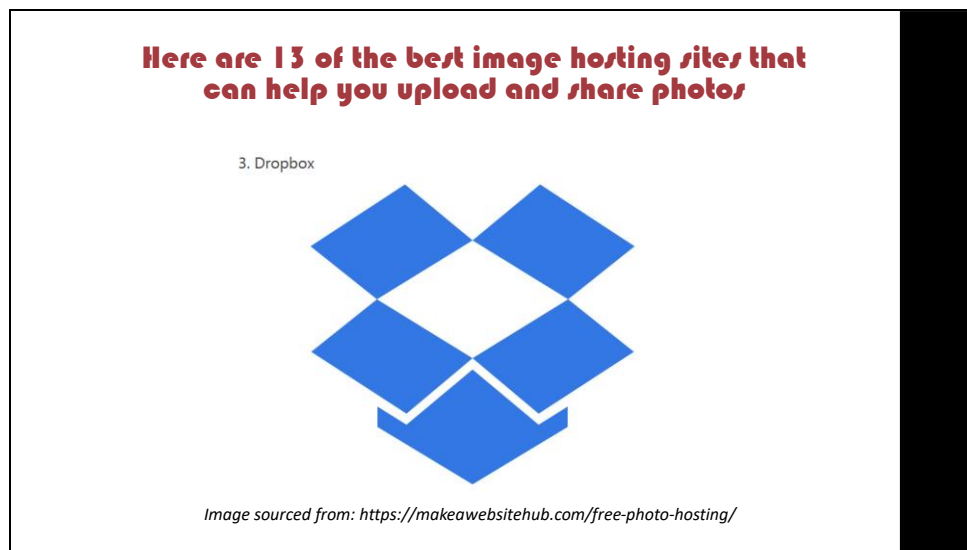

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

With Imgur, you can store an unlimited number of photos without worrying about your photos expiring. You don't need an account to upload photos to Imgur, but you can create a free account if you want to create albums, add captions, and upload your images via email attachments. They allow direct linking, and they give you a link for each image to post it in forums or embed it in HTML.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

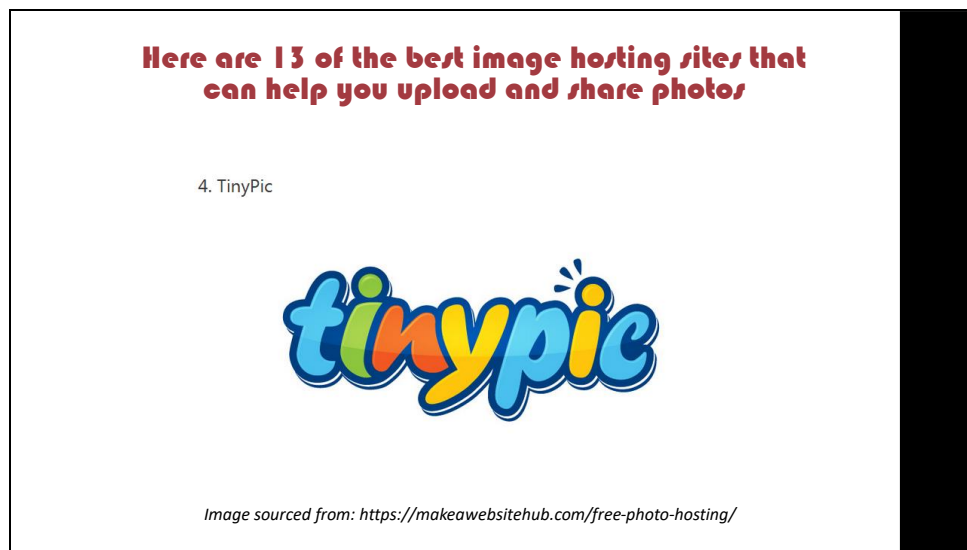

Here are 13 of the best image hosting sites that can help you upload and share photos

Dropbox lets you upload and store many types of file formats, including photos. It's a free cloud storage provider that provides you with shareable links to individual files or folders. Like Google Photos, it offers automatic backup, which is an important feature if you plan to upload most of your photos.

Dropbox doesn't change, edit, or resize the photos you upload in any way. Your original, unaltered photos will always be available on Dropbox. You can also sync your photos to a Dropbox folder on your desktop.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

TinyPic is owned by Photobucket, so it offers many of the same features. However, you don't need to create an account to upload photos, so you can quickly and easily upload a photo for sharing. To upload a photo, you simply select the image, add tags if you want to, and set the size of the photo. You'll get a link that you can use to share a photo anywhere. The optional tags will allow TinyPic users to find your photos through a search.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

5. Use

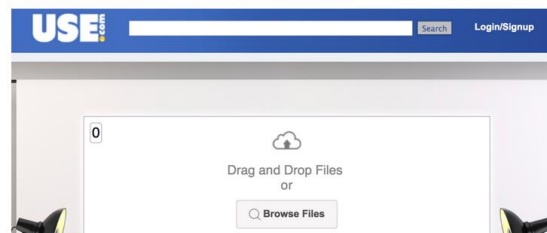

Image sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

Use has a bulk upload feature that lets you upload up to 100 images at once. If you plan to upload large quantities of images, Use might be the best option for you. All the image files remain on the site permanently, and there are no limitations on storage, file size, or bandwidth. You don't need to create an account to upload images to Use, but you can make your photos public or private.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

Flickr is one of the most famous images sharing sites on the web, and even though it's gone through changes since being purchased by Yahoo, it's still extremely popular with photographers. In addition to offering free hosting, it provides editing tools and allows you to organize your images into albums.

Flickr is also a social networking site, so you can share your photos with the entire Flickr community. There are many groups for different interests and topics, including nature, black and white photography, and fashion. Users can favourite others' photos and leave comments. If you want more privacy, you can edit your privacy settings, so you'll only share photos with selected individuals.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

500px is another image hosting site with social networking features. Professional and amateur photographers can both share their work, comment on photos, and follow their favourite users. Everyone can upload any photos they want to 500px, but the site is primarily used to showcase photography.

You can build a profile on 500px, and photographers can sell usage of their photos through the site. However, you can't directly link to photos on other websites. If you're looking for a platform to upload photos to share on social media or other sites 500px probably isn't the best option for you. The primary benefit of 500px is the opportunity to display your work and network with other photographers.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

SmugMug is similar to Flickr in that it gives photographers a place to showcase their work. Although it isn't as focused on the social media aspect of photo sharing as Flickr is, users can share their photos and view other work. When you create a SmugMug account, you create a customizable photo site. There are plenty of designs you can choose from, and the site has built-in editing tools to make changes to the design templates.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

9. Free Image Hosting.net

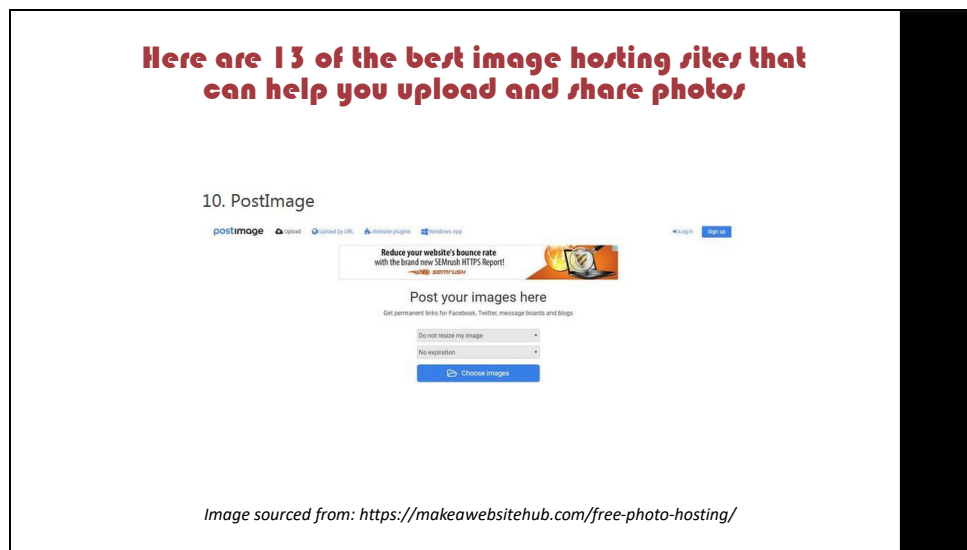

Image sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

Free Image Hosting is very similar to Imgur. You don't need an account to upload photos, and your photos will be stored on the site forever. The site gives you an HTML code to a link to your photo, which lets you easily share your files.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

With PostImage, you can store your photos permanently without creating an account. You can use the website or the desktop software to upload images up to 8 MB.

PostImage allows you to create a gallery with a unique link to share with others. Individual files also each have a direct link that you can share with others. You can resize your photos when you upload them. If you're planning on only sharing an image once, you can choose to let the photo expire after one day, one week, or one month. If you don't want the photos to expire, they'll stay on the site forever.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

ImageShack has a great interface that showcases its best photos in a layout similar to Pinterest's. You have to create an account to upload photos, but the free account offers many helpful features. You can organize your photos into albums, and you can add tags to keep track of your images and let other users discover your work. If you don't want the ImageShack community to view your photos, you can keep your images private or only share them with a selected audience.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

12. ImageVenue

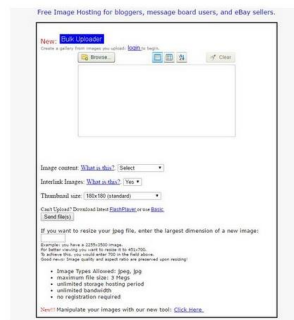

The screenshot shows the ImageVenue website's upload interface. At the top, it says "Free Image Hosting for bloggers, message board users, and eBay sellers." Below this is a "New" section with a "Click to Upload" button and a "Browse" button. There is a large empty box for the image. Below the box are several dropdown menus: "Image comment: What is this?", "Interlink images: What is this?", and "Thumbnail size: (100x100) (selected)". There is also a "Send Email" button. A section titled "If you want to resize your jpeg file, enter the largest dimension of a new image:" follows, with a text input field and a "Send Email" button. Below this is a list of features: "Image Types Allowed: jpeg, gif", "maximum file size: 3 MBs", "unlimited storage period", and "no registration required". At the bottom, there is a link to "Manipulate your images with our new tool! Click here."

Image sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

ImageVenue allows you to upload JPEG images, and it resizes larger pictures while retaining the quality when you upload them. You can upload images up to 3 MB in size, and the site allows a maximum storage size of 3 GB per month. ImageVenue is ideal for people who need to upload and sort large amounts of images to share with others.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

Here are 13 of the best image hosting sites that can help you upload and share photos

imgbox is completely free and will store your photos permanently. The site is quick and simple to use, and it offers unlimited storage space. You can upload JPG, GIF images, or PNG files up to 10 MB in size. The platform offers drag and drop uploading, direct links, forum-friendly codes, and image galleries.

You do not need to create an imgbox account to upload photos, but creating account allows you to revisit your photos and galleries. With an account, you can also pre-set your upload settings, which makes uploading photos much faster.

Sourced from: <https://makeawebsitehub.com/free-photo-hosting/>

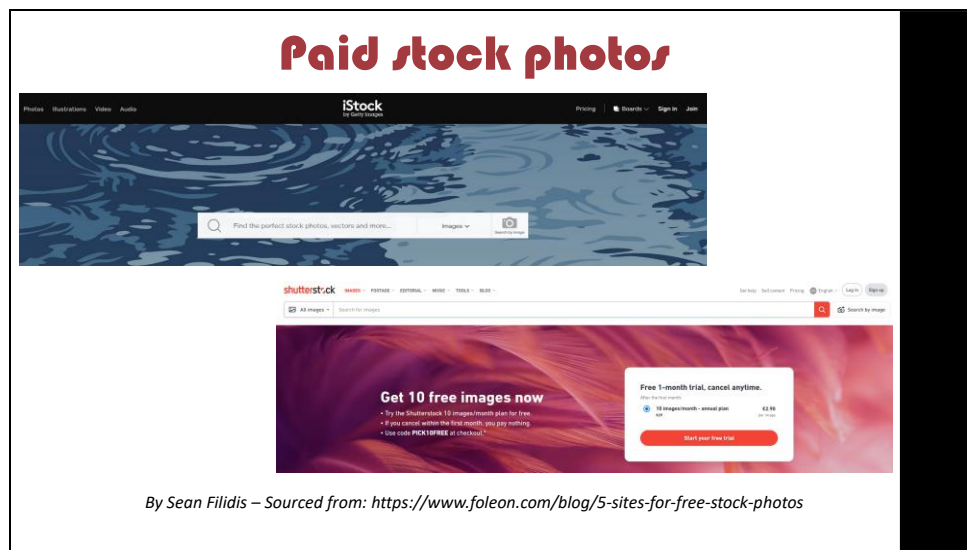

Free stock photos

10 Sites for free stock photos (updated for 2019)

With human brains processing images 60,000 times faster than text, good photos are vital for grabbing attention and getting your message across. But what do you do if you don't have enough visual material? Get it for free from one of these free stock photo websites!

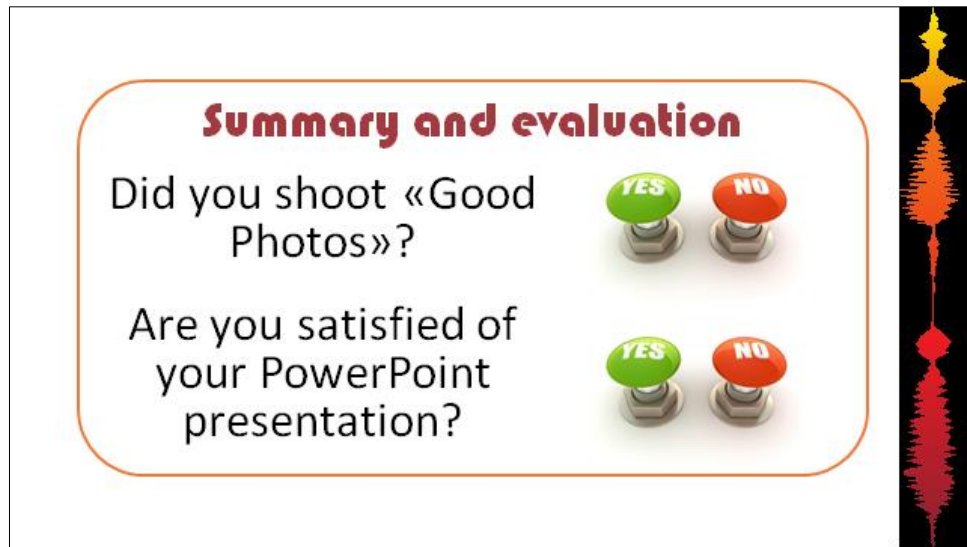

By Sean Filidis – Sourced from: <https://www.foleon.com/blog/5-sites-for-free-stock-photos>

Paid stock photos

[iStockphoto.com](https://www.istockphoto.com) (by Getty Images) and [Shutterstock.com](https://www.shutterstock.com) are the most well-known **paid** stock photo sites. You can find pictures of virtually anything here — but at a hefty price. Also, many of the stock photos are just too, well, “stocky.” Think over-the-top typically American pictures of absurdly happy people with unnaturally white teeth. Luckily, there are alternatives.
